

Contraceptive Provision Measures

Technical Documentation: Historical Reports v1.03a

It is highly recommended that users download and use the most current version of the SAS Programs for measure calculation, since it uses the latest specification for the contraceptive provision measures.

Should you wish to reproduce previous reports of contraceptive provision rates, you may download the previous version 1.03a of the SAS Programs and claims code lookup tables. The SAS Programs v1.03a are available in the file:

- contraceptive-measure-progs-v1.03a.zip (26 KB)

For data years 2013-2016, the lookup tables are in the file:

- contraceptive-lookup-tables-pre-2017.zip (459 KB)

For data year 2017, the lookup tables are in the file:

- contraceptive-lookup-tables-2017.zip (69 KB)

For data year 2018, the lookup tables are in the file:

- contraceptive-lookup-tables-2018.zip (84 KB)

The master sources for the OPA-defined contraceptive method and condition codes are available in the files named below.

For data years 2013-2016:

- Contraceptive-Code-Lookup-pre-2017.xlsx (246 KB)

For data year 2017:

- Contraceptive-Code-Lookup-2017.xlsx (160 KB)

For data year 2018

- Contraceptive-Code-Lookup-2018.xlsx (149 KB)

These Excel files are for analyst reference only and are not required by the SAS programs.

Please note that 2018 measure rates calculated with v1.03a SAS programs are **not directly comparable** to 2013-2017 data years. That is because the 2013-2017 claims code tables use ICD-9 and ICD-10 procedure codes and ICD-9 diagnosis codes to flag live birth events, whereas the specifications were revised with the 2018 claims code tables to also include ICD-10 diagnosis codes for live births. The 2018 tables also exclude diagnosis and procedure codes related to labor, delivery, and postpartum care to flag pregnancy. Furthermore, v1.03a will no longer receive updates.
