

Providing Family Planning Care for Non-Pregnant Women and Men of Reproductive Age in the Context of Zika

A Toolkit for Healthcare Providers

Version 4: September 15, 2018

This version has been updated to reflect CDC guidance published on August 10, 2018.

This toolkit will continue to be updated on an ongoing basis, as new research findings and clinical recommendations are published. We encourage providers to check the U.S. Office of Population Affairs website (www.hhs.gov/opa/) to ensure they are using the latest version.

The HHS Office of the Assistant Secretary for Health (OASH) provides national leadership and coordination to improve the health of all people and communities, with the aim of promoting wellness and preventing illness and injury. OASH oversees 12 core public health offices — including the Office of Population Affairs — as well as 10 regional health offices across the nation and 10 presidential and secretarial advisory committees. OPA administers the Title X family planning program and serves as the focal point to advise the Secretary and the Assistant Secretary for Health on a wide range of reproductive health topics.
