For 50 years, Title X family planning clinics have played a critical role in ensuring access to a broad range of family planning and related preventive health services for millions of low-income or uninsured individuals and others. Title X is the only federal grant program dedicated solely to providing individuals with comprehensive family planning and related preventive health services. This infographic aggregates available data from the life of the program to provide insight into the breadth and depth of Title X-funded services.

Providers served a varied population, most of whom were women.

**Title X clients served since 1970**

- 96% were female
- 4% were male
- 27% were adolescents
- 73% were adults

Title X clinics have served more than 190 million clients, including:

- 182.2 million women
- 8.1 million men
- 139.5 million adults
- 50.8 million adolescents

*From 1970 through 2019, an estimated 190.3 million individuals visited a Title X-funded clinic for family planning and related preventive health services. This estimated cumulative number of Title X clients is not an unduplicated count; individuals who seek Title X care over many years will be counted as a client in each of the years they make a visit.
Title X providers offered clients a broad range of effective and medically safe contraceptive methods approved by the U.S. Food and Drug Administration.

Of all female clients, 82% (73.7 million) used a most (9%), moderately (54%), or less (19%) effective method of contraception at the conclusion of their last clinic visit with a Title X provider.¹

Screening and Preventive Health Services

Title X-funded sexually transmitted disease (STD) and human immunodeficiency virus (HIV) screening services prevented transmission and adverse health consequences.

Clinics performed:
- 34.1 million chlamydia tests‡
- 18.3 million HIV tests
- 76.5 million non-HIV STD tests

Title X-funded cervical and breast cancer screenings contributed to early detection and treatment.

Title X clinics provided:
- Papanicolaou (Pap) testing to 37 million female clients
- Clinical breast exams to nearly 42 million female clients

¹ The cumulative numbers of female users served and cumulative numbers of females using most, moderately, or less effective methods are not unduplicated counts.

‡ Data reflect services provided from 2005 through 2019 and assumes 1 chlamydia test per user tested.
